

SHAPING THE FUTURE WITH AI

# Sovereign GenAI Solutions on a Fully Managed AI Platform

SHAPING THE FUTURE WITH AI

# Sovereign AI Solutions

## Realize your AI potential

By combining Sentia's deep cloud expertise with best-in-class AI capabilities from 2021.AI, we give public and enterprise clients the infrastructure, guidance, and tools needed to deploy AI with confidence - at speed and at scale. Whether you're taking your first steps or accelerating an existing AI journey, our joint offering is designed to meet you where you are and move you forward.

## Managed AI platform

**Enterprise-grade AI infrastructure - secure, scalable, and ready to deploy.**

Running AI at enterprise scale demands a foundation you can trust. The AI platform provides a fully managed, cloud-agnostic platform handling everything from deployment to ongoing operations, so your teams can focus on driving value from AI rather than managing infrastructure.

For organisations with strict data sovereignty or regulatory requirements, Sentia also supports on-premise and hybrid cloud deployments - giving you full control over where your data lives and how your AI operates, without compromising on capability or performance. Your AI, on your terms.

- ✓ Danish Software
- ✓ Danish Private Cloud
- ✓ Danish Advisory
- ✓ Full AI stack
- ✓ Data Sovereign
- ✓ Out of the box

## SOLUTION

# Getting Started with Sovereign AI

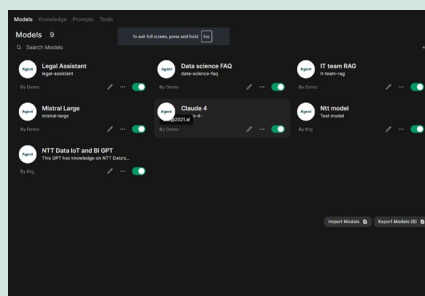

## Your AI journey, at your own pace

You don't need to transform everything at once. Our Managed AI Platform is designed to let you start with what matters most - a single use case, a specific team, or one business challenge - and expand as your confidence and ambition grow.

### Secure Enterprise chat for employees

Get a secure enterprise chat with Open Web UI interface and build AI assistants to create productivity — securely!

### Empower your developers to create teams of AI agents

Develop teams of AI agents that work together to automate tasks, optimize workflows, and solve complex problems faster.

### Custom AI for your specific use cases

We analyze your use cases and build custom solutions for your specific needs!

## AI Built, Deployed, and Managed

Every AI solution is powered by our Managed AI Platform - a unified, enterprise-grade environment designed for end-to-end AI development, deployment, and governance.

Development | Deployment | Governance

## Deploy Your AI Anywhere

Unlock the flexibility of AI deployment whether you need the security of a private cloud, the scalability of public cloud providers, or a hybrid approach for the best of both worlds, our solution adapts to your infrastructure.

Private Cloud | Public Cloud | Hybrid Cloud

## SOLUTION

# AI Use Cases in Business Operations

## Smarter operations with AI that sees, reads & acts

Combine text, images, and data to automate workflows, cut costs, and boost efficiency. From customer service to supply chains, AI now understands, and improves, your business.

Supports all models:

 Claude

 Gemini

 LLaMA

 Gemma

 Mistral AI

## Turn Data Chaos into Business Wins

Unstructured data (documents, images, videos) slows you down. With the managed GRACE platform, your teams can leverage LMMs to make smarter decisions, reduce errors, and work faster.

### USE CASE

#### Image generator

Create custom visuals, ads, or product mock-ups in seconds.

### USE CASE

#### Contract assistant

Draft, review, and flag risks in legal documents fast.

### USE CASE

#### CMS deployment

Auto-generate and update e.g. website content with AI.

### USE CASE

#### Document processing

Extract, sort, and analyze data from files instantly.

### USE CASE

#### HR Assistant

Screen resumes, answer employee queries, and automate onboarding.

### USE CASE

#### CV Review

Scan resumes for skills, red flags, and best-fit candidates.

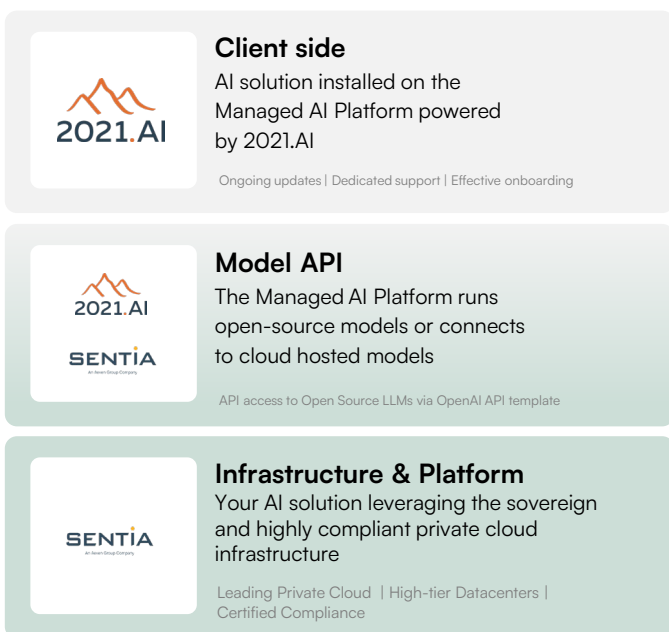

# Sovereign AI Stack

## Resilient AI. Robust Operations. Fully Managed.

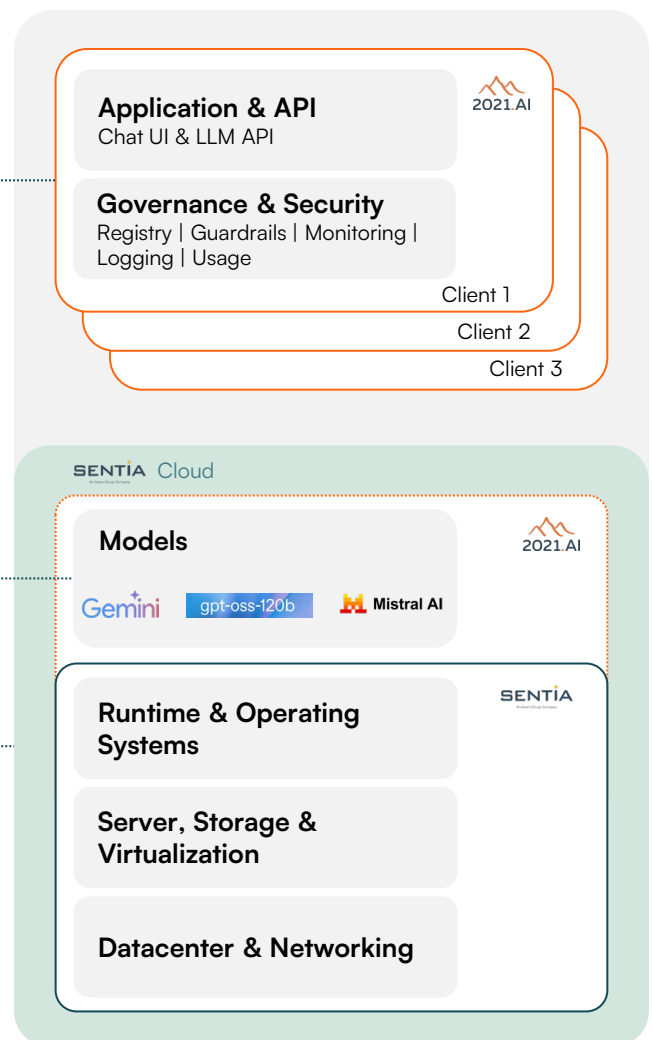

Our enterprise-grade AI solutions are built for resilience - handling disruptions, scaling effortlessly, and delivering consistent performance. With fully managed deployment, you get seamless integration, 24/7 monitoring, and expert support - so your operations stay agile, secure, and always ahead.

## Secure integration on Hybrid Cloud

Run AI on sovereign private cloud or in the public cloud with enterprise-grade security, built-in compliance, and effortless scalability. We handle the risks - you focus on results.

- ✓ Multi-model
- ✓ Open-source
- ✓ Safety
- ✓ Security

# AI Governance

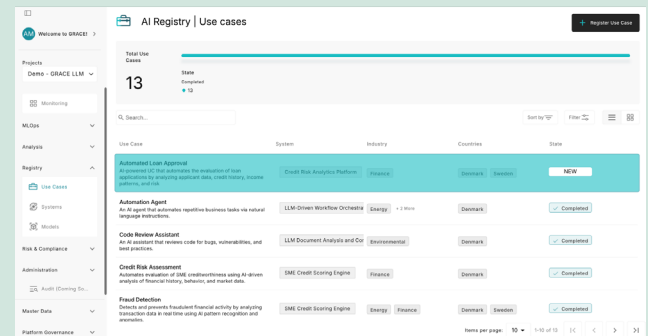

## Stay in control of your AI

Stay in control of your AI with governance that makes oversight simple and scalable. Set clear accountability, manage risk, and monitor performance end-to-end—so every model remains compliant, transparent, and aligned with your business goals.

## Auto AI Registry

AI Auto Registry is a fully automated, enterprise-grade solution from 2021.AI that provides real-time visibility, compliance, and risk management for all AI models, systems, and use cases across your organization.

From generative AI and machine learning to autonomous agents, AI Auto Registry ensures complete transparency, regulatory compliance (GDPR, EU AI Act, etc.), and optimized AI performance.

### Compliance-ready

Stay ahead of the EU AI Act and GDPR with clear documentation, risk assessments, and controls as a part of the GRACE platform, reducing regulatory exposure and helping you respond confidently to audits and inquiries.

### Clear ownership and faster approvals

Define decision rights across business, IT, security, HR, legal, and compliance so every use case has an accountable owner, a simple approval path, and consistent quality checks.

### Visibility and control over Shadow AI

The GRACE platform is your single source of truth for where AI is used, by whom, and for what purpose. An AI inventory and lightweight oversight stops uncontrolled tool sprawl and close hidden risk gaps.

### Risk-to-action governance

Turns risks into a practical action plan prioritizing high-impact use cases, assigning owners, implementing controls (e.g., data handling, human review, vendor terms), and tracking remediation to closure.

Sentia provides powerful data center infrastructure with a strong focus on GDPR compliance, ensuring EU-based data storage and processing for secure, scalable AI deployments. Governance, risk assessment, and regulatory compliance remains the responsibility of the client or AI solution provider.
