IT SECURITY

Managed Detection & Response

Protect your digital assets from advanced security threats

Detecting threats or the early signs of a breach is a delicate game considering compliance complexities, permission mazes and data sprawl - all contributing to false positive pitfalls and hindering correct and timely response.

Take advantage of Managed Detection & Response to access detailed data collection, analysis, and reporting options, enabling unified security operations to maintain control over user IDs and correlate events across your endpoints and other integrated sources. Get access to a comprehensive threat intelligence database with detailed analytics and reporting capabilities. We ensure your optimal platform setup, cybersecurity best practices and a defense-in-depth framework.

Proactive threat detection and response - fully managed

Detect, analyze, and respond to advanced security breaches with automated responses including isolating endpoints, blocking malicious traffic, or implementing protective measures across integrated services and platforms.

IMPROVED ENDPOINT PROTECTION

Unlock advanced next-generation threat protection to block, detect, and notify your team of malicious activities on organizational endpoints.

HOLISTIC CYBER SECURITY

Expand your cyber security to include a range of data sources such as users, email, servers, cloud workloads and network activity.

ADVANCED THREAT RESPONSE

Leverage advanced response capabilities with System Orchestration, Automation and Response and Security Information and Event Management.

Focus on what matters for your business and let Sentias security operations center configure your platform, manage the integrated identity security while responding to- and managing alerts for endpoints, servers or collaboration platform security.

- Detect and Response
- Support Services
- Security Analytics
- Threat Hunting
- Immediate Containment
- Security Incident Notification
- Platform Management
- Monthly Reporting Security
- Team Prioritization

IT SECURITY

Managed Detection & Response

6 steps to your advanced threat protection

1

Consultation

Your application landscape can be complex, so we start out with a dialogue about your security needs and consult you about the optimal configuration.

2

Alignment

The recommended service is checked for any deviations from your request and is aligned to e.g. adjusted scope of the solution.

3

Selection

The recommended and aligned standard service and plan is selected and for delivery as a proof of concept no matter your organizational size or complexity.

4

Implementation

The agreed solution is configured and set in operation. The project is managed by an allocated consultant og project manager depending on the model.

5

Adjustment

Taking into account experiences from the POC project, we agree upon needed or necessary service adjustments from standard.

6

Follow-up

Our service is kept up to date and aligned with future changes and development to the technology. As your configuration might need updates, together, we will walk you through and configure any major changes.

Getting started

Take advantage of Sentias expertise to secure the professional practice for your cyber security strategy. Contact us to learn how we can help you secure business critical applications and recommend you the right plan aligned with your business implemented after best practices.
