Managed Network Security

Safeguard the Lifeblood of Your Organization

Many businesses struggle with realizing the advanced threat protection levels necessary to sufficiently secure the connection to mission-critical resources and provide a genuinely safe online work environment for employees.

Take advantage of our services to detect suspicious behavior and block sophisticated attacks through real-time traffic analysis ensuring advanced encryption, vulnerability management proactive action and response.

Your Advantages of Secure Networking

The unified threat security delivers robust and centrally managed network protection at each location, ensuring secure, encrypted connectivity between sites, central infrastructure, and hybrid cloud environments. With simplicity, scalability, and advanced security built into its design, Sentia takes full responsibility for management, monitoring, and maintenance of your comprehensive network security.

SECURE NETWORK ARCHITECTURE

We design and configure your secure and segmented network architecture after best practices across sites. Built on 802.1x advanced access control framework and configured for both enterprise and guest connectivity, the logical separation of networks ensures your traffic isolation and security.

NEXT-GEN FIREWALLING

Leverage encrypted traffic tunnels between your sites, hybrid cloud resources, and central infrastructure, with dynamic IP allocation for enhanced privacy. Layer 7 firewalls provides you with advanced threat-prevention from deep packet inspection, intrusion prevention systems and application awareness.

ZERO TRUST ACCESS

Trusting no user or device per default and only providing least-privileged access you can reduce your attack surface with high port security, a strict and Single-Sign-On-ready authentication framework as well as continuous verification processes.

UNIFIED THREAT MANAGEMENT

Sentia's experts monitor system and access point availability, troubleshooting, notifying and resolving incidents. Proactive maintenance ensures optimal performance and security for your managed solution, fully integrated with secure connectivity and network infrastructure.

Managed Network Security

6 Steps to Your Secure Network Infrastructure

1

Consultation

Your infrastructure and device landscape can be complex, so we start out with a dialogue about your network needs and consult you about the optimal configuration.

2

Alignment

The recommended service is checked for any deviations from your request and is aligned to e.g. adjusted scope of the solution.

3

Selection

The recommended and aligned standard service and plan is selected and for delivery as a proof of concept no matter your organizational size or complexity.

4

Implementation

The agreed solution is configured and set in operation. The project is managed by an allocated consultant og project manager depending on the model.

5

Adjustment

Taking into account experiences from the POC project, we agree upon needed or necessary service adjustments from standard.

6

Follow-up

Our service is kept up to date and aligned with future changes and development to the technology. As your configuration might need updates, together, we will walk you through and configure any major changes.

Getting started

Take advantage of Sentias expertise to secure a fully managed network security architecture. Contact us to learn how we can help you secure advanced cyber threat protection in your network security design. We will provide you with a complete mapping and recommend you the right plan aligned with your business and implemented and after best practices.
