Security Management

Protect your data, identities and devices

Cyber attacks are intentionally targeted users and devices with the purpose of obtaining unauthorized access to systems and data. Ad hoc and decentralized provisioning of access and rights depending on the individual system and access point is contributing to the organizational vulnerability and diminishes compliance.

As the weakest points across your attack surface, they require attentive security administration of the already cumbersome data, user and identity management.

Your Security Management advantages

One scenario that we often meet is that in spite of having invested in the Microsoft 365 suite, few features and tools are utilized by the organization. This especially true for the security threat mitigation of users, data and devices. Take advantage of Security Management to implement and maintain an effective security baseline. Sentia will ensure that your functionalities are continuously up-to-date and positioned for changes in the threat landscape, new security standards and updates and improvements.

| ENHANCE SECURITY

Keep your sensitive assets secure and protected on multiple levels from internal and external threats without compromising accessibility.

| IMPROVE COMPLIANCE

Feel confident and achieve capabilities for documenting the full compliance of both organization and regulatory requirements.

| RAISE CONTROL

Meet business and regulatory demand and take advantage of automated processes for user, data and device management.

| OFFER A SECURE WORKPLACE

With the professional management of IT security you can free up resources and focus on what brings you the most value.

Security Management

6 steps to your secure digital workplace

1

Consultation

Your data, user and device landscape can be complex, so we start out with a dialogue about your license needs and consult you about the optimal configuration.

2

Alignment

The recommended service is checked for any deviations from your request and is aligned to e.g. adjusted scope of the solution.

3

Selection

The recommended and aligned standard service and plan is selected and for delivery as a proof of concept no matter your organizational size or complexity.

4

Implementation

The agreed solution is configured and set in operation. The project is managed by an allocated consultant og project manager depending on the model.

5

Adjustment

Taking into account experiences from the POC project, we agree upon needed or necessary service adjustments from standard.

6

Follow-up

Our service is kept up to date and aligned with future changes and development to the technology. As your configuration might need updates, together, we will walk you through and configure any major changes.

Getting started

Take advantage of Sentias expertise to secure the professional practice for your security management. Contact us to learn how we can help you secure an overview of your user base and recommend you the right plan aligned with your business implemented and after best practices.
