

Vulnerability Scan

Improve your infrastructure security posture

Securing critical IT infrastructure is of ever-increasing importance. However, few organizations have the full overview of their landscape and assuming that all attack vectors are covered can lead to devastating consequences.

With Sentias managed vulnerability scan you can achieve control and gain insight into exactly where your security require improvements to avoid potential breaches or cyber threats before they occur.

Plans	EXTERNAL SCANNING	EXTERNAL & INTERNAL SCANNING	WEB SCANNING
Scan targets	External IP's	External and internal IP's	Specific websites
Scan frequency	Weekly	Weekly	Weekly
Pre-analysis and requirement coordination with client	✓	✓	✓
Detailed report with analysis and recommendations	✓	✓	✓
Online follow-up meeting	✓	✓	✓
Application vulnerability monitoring		Add-on	

Vulnerability Scanning is provided in three configurations. Automated external, internal or web scans evaluate and provide insight into vulnerabilities with data displayed in detailed reports including recommendations for effective optimization.

Next Step & Pricing

Together, we define your scanning targets and plan the activity. After completed scanning you will receive a report including severity scoring, recommended actions for remediation and status of systems scanned. The service is provided at a fixed monthly cost based on agreed period - get in touch to learn more.
