Managed Public Cloud

Cloud
Foundation©

Secure your company's future with Sentia's Managed Public Cloud solutions allowing you to optimize operational costs, scale at speed and source the latest cloud technology. As your strategic cloud partner, we are cloud agnostic which ensures that we put your business first. Using our proven 5D transformation approach and cloud Landing Zone adoption framework, we help you run large-scale cloud migrations in a streamlined way and implement robust operating models that are aligned with your specific business context.

How Managed Public Cloud will help you lead the way

Adapt to usage peaks with the flexibility and availability of the cloud.

Efficiently manage the costs of your infrastructure by only paying for what you use.

Grow your business without limitations, thanks to a solid base in the agile cloud.

Guarantee uptime by letting Sentia manage your infrastructure.

## Fully managed by leading experts helping you on your cloud journey

✓ Performance Management

✓ Optimization & Cost Management

✓ Capacity Management and Invoicing

Managed Public Cloud

Empower your business to grow

Together with you, we will design a solution that specifies the service level targets and selected redundancy of the your service. Sentia's public cloud control and optimization services are grouped into three clearly defined responsibility tiers that define the extent of your outsourcing:

Managed Infrastructure

Delivery	Provisioning
Customer management	Customer provisioning
Infrastructure management	Landing zones

Managed Platform

Delivery	Provisioning
Customer management	Customer provisioning
Platform management	Deployment
Infrastructure management	Landing zones

Application Management

Delivery	Provisioning
Customer functional mgt	
Technical application management	Deployment
Platform management	
Infrastructure management	Landing zones

Technology layers:
- Data
- Applications
- Runtime
- Middleware
- Operating system
- Virtualization
- Servers | Storage
- Core infrastructure
- Datacenter

Legend: ☐ Sentia ☐ Customer

Cloud Foundation

Sentia manages your cloud infrastructure, leveraging automated landing zones to deliver a robust cloud foundation which provides you virtualized network, compute, and storage resources on the public cloud. Technology layers up untill and including the hypervisors are managed by Sentia and you are responsible for software and data on top.

Platform Management

Sentia manages operating systems and middleware such as database platforms and development tools i.e. programming languages, SQL databases, application frameworks and stacks. Sentia takes care of the deployment and management of the platform and you are responsible for the application. Using Sentia's deployments mechanisms for app provisioning is optionable.

Application Management

Sentia manages all technical aspects of the application or database, including identity and access management, sizing, repositories, deployment & automation, performance monitoring, event management and insights. You are responsible of the application life cycle management, development, user administration, and end-user support with provisioning via Sentia's deployment mechanisms.
